

Questions Interview Frontend Developer

Coding Standards:

- Are there specific coding standards that need to be used?
- Are there particular coding conventions or guidelines we should follow in the development of this tool?
- Are there preferences regarding readability, maintainability, or scalability of the front-end code?

Technologies and Services:

- Does the project have a preference for certain programming languages or frameworks for the frontend?

Content Display:

- Are there specific requirements concerning the formatting or structure of the generated content?
- Are there performance requirements that the frontend of the tool must meet, such as load time or responsiveness?

Integration and Implementation:

- Does this tool need to integrate with existing systems or platforms, such as APIs or backend services?
- What is needed to make the Proof of Concept (POC) usable and implementable from a front-end perspective?
- What about the output of the frontend part of the project? Are there specific file formats or integration capabilities required for the generated output?
